## **ADVISORY ACTION**

Applicant's arguments filed May 25, 2006 have been fully considered but have not been found to be persuasive.

1. Applicant argues, on page 16, that Gehrke et al only disclose one layer with roughening, knurling, nicks or cuts.

However, because Gehrke et al disclose a layer with roughening, knurling, nicks or cuts and disclose multilayer films comprising the layers, Gehrke et al disclose a multilayer film in which each layer has roughening, knurling, nicks or cuts.

Applicant also argues that Gehrke et al do not disclose separate, unique distinct elements of a first layer having a surface – roughened portion and a fourth layer having a score line, because Gehrke et al equate roughening and knurling with nicks and cuts.

However, as stated above, Gehrke et al disclose a multilayer film in which each layer has roughening, knurling, nicks or cuts.

Applicant also argues, on page 18, that further explanation should be provided as to how a teaching away from the use of a perforation motivates one of ordinary skill in the art to vary the depth of a score line to obtain desired barrier properties.

However, Gehrke et al disclose that a perforation which extends through the film allows product environment changes within the film, defeating the purpose of a barrier layer (column 1, lines 40 – 49); Gehrke et al therefore disclose that a depth of a score line of 100% thickness of the film defeats the purpose of a barrier layer, and therefore disclose the selection of depth of a score line to obtain desired barrier properties because barrier properties are dependent on the depth of the score line. Therefore, in the absence of unexpected results, it would be obvious for

Application/Control Number: 10/689,478 Page 3

Art Unit: 1772

one of ordinary skill in the art to vary the depth of a score line to obtain desired barrier

properties.

Applicant also argues, on page 19, that Gehrke does not teach a first layer having a

surface roughened portion and a fourth layer having a score line.

However, as stated above, a first layer having a surface roughened portion and a fourth

layer having a score line are disclosed by Gehrke et al.

2. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Marc A Patterson whose telephone number is 571-272-1497.

The examiner can normally be reached on Mon - Fri 8:30 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Harold Pyon can be reached on 571-272-1498. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
